Descendants of William Cromartie and Ruhamah Doane Amanda Cook Gilbert 2013-10-09 This ambitious work chronicles 250 years of the Cromartie family genealogical history. Included in the index of nearly fifty thousand names are the current generations, and all of those preceding, which trace ancestry to our family patriarch, William Cromartie, who was born in 1731 in Orkney, Scotland, and his second wife, Ruhamah Doane, who was born in 1745. Arriving in America in 1758, William Cromartie settled and developed a plantation on South River, a tributary of the Cape Fear near Wilmington, North Carolina. On April 2, 1766, William married Ruhamah Doane, a fifth-generation descendant of a Mayflower passenger to Plymouth, Stephen Hopkins. If Cromartie is your last name or that of one of your blood relatives, it is almost certain that you can trace your ancestry to one of the thirteen children of William Cromartie , his first wife, and Ruhamah Doane, who became the founding ancestors of our Cromartie family in America: William, Jr, James, Thankful, Elizabeth, Hannah Ruhamah, Alexander, John, Margaret Nancy, Mary, Catherine, Jean, Peter Patrick, and Ann E. Cromartie. These four volumes hold an account of the descent of each of these first-generation Cromarties in America, including personal anecdotes, photographs, copies of family bibles, wills, and other historical documents. Their pages hold a personal record of our ancestors and where you belong in the Cromartie family tree.

Structural Design from First Principles Michael Byfield 2018-01-29 This enlightening textbook for undergraduates on civil engineering degree courses explains structural design from its mechanical principles, showing the speed and simplicity of effective design from first principles. This text presents good approximate

~~*Structuring*~~ complex design problems, such as "Wembley-Arch" type structures, the design of thin-walled structures, and long-span box girder bridges. Other more code-based textbooks concentrate on relatively simple member design, and avoid some of the most interesting design problems because code compliant solutions are complex. Yet these problems can be addressed by relatively manageable techniques. The methods outlined here enable quick, early stage, "ball-park" design solutions to be considered, and are also useful for checking finite element analysis solutions to complex problems. The conventions used in the book are in accordance with the Eurocodes, especially where they provide convenient solutions that can be easily understood by students. Many of the topics, such as composite beam design, are ~~*Report of the*~~ Eurocodes, but with the underlying theory fully explained. The techniques are illustrated through a series of worked examples which develop in complexity, with the more advanced questions forming extended exam type questions. A comprehensive range of fully worked tutorial questions are provided at ~~*Monthly Statistical Bulletin*~~ students to practice in preparation for closed book exams.
