Anaerobic Biodigesters for Human Waste Treatment Mukesh Kumar Meghvansi 2022-08-21 The edited book brings out a comprehensive synthesis of latest scientific literature covering various important aspects of anaerobic biodigesters for human waste management that ranges from latest understanding on fundamental concepts/mechanisms of anaerobic biodigestion, modern tools and techniques used in process evaluation, current strategies being recruited for the performance enhancement, and case studies/ success stories across the world on applications of biodigesters used in human waste treatment. The anaerobic biodigestion is a process of break-down of organic waste by anaerobic microorganisms in absence of the oxygen. This process has been conventionally used for treating various types of organic waste including sewage sludge. After optimizing various process parameters, researchers have developed anaerobic biodigesters that have been successfully used for human waste (nigh soil) treatment. The topic of human waste treatment assumes global significance in the wake of UN sustainable Development Goals (SDG) wherein SDG-6 specifically highlights the Sanitation for all by 2030. The anaerobic Biodigester technology has the potential to manage the human waste as well and can contribute immensely in achieving targets of UN-SDG-6. This book is of interest to researchers, academicians, scientists, policy officials and capacity builders. Also the book serves as additional reading material for undergraduate and graduate students of environmental Biotechnology. National and international biotechnologists, environmental engineers and sanitation experts also find this to be a useful read.

**George Roerich** H. Михайлова 2018-12-20 George Roerich (1902-1960) was a prominent Russian scientist, orientalist, linguist and encyclopaedist of the 20th century, a worthy successor to the traditions of Russian Oriental Studies. His books on Tibetan Studies, Indology and Mongolian Studies, published in various countries and in different languages, have long been considered classics of orientalism. His name figures in the list of honorary members of numerous scientific societies in Europe, Asia and America. He not only had a comprehensive knowledge of history, archaeology, literature, ethnography, religion, and cultural studies, but also knew more than 30 Eastern and Western languages perfectly; these were not only classical European and Eastern languages, but also indigenous Indian and Tibetan dialects. This allowed him to communicate freely with Asian people, to understand their cultural traditions, and to achieve deep insights in his dialogues with them.
