International Financial Statistics, July 2014 International Monetary Fund. Statistics Dept. 2014-07-07

The IMF's principal statistical publication, International Financial Statistics (IFS) Online, is the standard source of international statistics on all aspects of international and domestic finance. For most countries, IFS Online reports data on balance of payments, international investment position, international liquidity, monetary and financial statistics, exchange rates, interest rates, prices, production, government accounts, national accounts, and population. Updated monthly.

[Smart Grid](#) Stephen F. Bush 2014-03-31 This book bridges the divide between the fields of power systems engineering and computer communication through the new field of power system information theory.

Written by an expert with vast experience in the field, this book explores the smart grid from generation to consumption, both as it is planned today and how it will evolve tomorrow. The book focuses upon what differentiates the smart grid from the "traditional" power grid as it has been known for the last century.

Furthermore, the author provides the reader with a fundamental understanding of both power systems and communication networking. It shows the complexity and operational requirements of the evolving power grid, the so-called "smart grid," to the communication networking engineer; and similarly, it shows the

complexity and operational requirements for communications to the power systems engineer. The book is divided into three parts. Part One discusses the basic operation of the electric power grid, covering fundamental knowledge that is assumed in Parts Two and Three. Part Two introduces communications and networking, which are critical enablers for the smart grid. It also considers how communication and networking will evolve as technology develops. This lays the foundation for Part Three, which utilizes communication within the power grid. Part Three draws heavily upon both the embedded intelligence within the power grid and current research, anticipating how and where computational intelligence will be implemented within the smart grid. Each part is divided into chapters and each chapter has a set of questions useful for exercising the readers' understanding of the material in that chapter. Key Features: Bridges the gap between power systems and communications experts Addresses the smart grid from generation to consumption, both as it is planned today and how it will likely evolve tomorrow Explores the smart grid from the perspective of traditional power systems as well as from communications Discusses power systems, communications, and machine learning that all define the smart grid It introduces the new field of power system information theory

[Historical Trends](#) John A. Grymes 1992 For the second time, the National Center for Education Statistics has prepared a report that brings together comparable data concerning several key education characteristics, by state, region, and outlying area for a consecutive 21-year period. Characteristics examined in this report for public elementary education and secondary education include: (1) enrollment; (2) children with disabilities served under IDEA-B and Chapter 1 of the Elementary and Secondary Education Act; (3) regular high school graduates; (4) number of teachers and staff; (5) ratio of pupils to teachers and staff; (6) teacher salaries; and (7) expenditures. In addition to the multiple comparisons, the report presents percentage change comparisons at 20-, 10-, and 5-year intervals. Each of the tables in this publication is combined with two charts that show changes for each state in the 1970s and 1980s. Included are two sections: (1) public elementary education and secondary education (includes 16 tables and 32 charts); and (2) higher education (includes 25 tables and 50 charts). Three appendixes contain tables of data concerning the U.S. population in 1969-89, the estimated school-aged population for 1970-89, and selected price indices; a list of definitions; and a guide to sources.
