Management Control with Integrated Planning

Lukas Rieder 2020-08-19 Management Control is
the process by which managers at all hierarchical
levels ensure that their strategic intentions are
realized. This requires a management control
system that enables managers to map external
developments to the internal planning and control
processes and to improve the coordination
between all actors. The book offers concrete
guidance on how to build an integrated planning
and control system. The requirements are derived

from management models and from corporate management practice. The book presents the fundamentals and models, while also guiding readers through a comprehensive simulation model programmed in Excel. Using this model, readers can trace the dependencies, structures and calculation methods used in detail, and identify the effects on other areas. The goal is to provide a design template for the implementation of a decision-relevant management accounting system as well as for winning internal piloting indicators and early warning information that readers can use at their own organizations. Given

its focus, the book will be a valuable asset for managers and specialists, service providers, project developers, producers and traders, public enterprises, NGOs, consultants and lecturers in the fields of management, controllership and information technology.
