The Destruction of the Medieval Chinese Aristocracy Nicolas Tackett 2020-10-26 Historians have long been perplexed by the complete disappearance of the medieval Chinese aristocracy by the tenth century—the “great clans” that had dominated China for centuries. In this book, Nicolas Tackett resolves the enigma of their disappearance, using new, digital methodologies to analyze a dazzling array of sources. Tackett systematically mines thousands of funerary biographies excavated in recent decades—most of them never before examined by scholars—while taking full advantage of the explanatory power of Geographic Information System (GIS) methods and social network analysis. Tackett supplements these analyses with extensive anecdotes culled from epitaphs, prose literature, and poetry, bringing to life women and men who lived a millennium in the past. The Destruction of the Medieval Chinese Aristocracy demonstrates that the great Tang aristocratic families adapted to the social, economic, and institutional transformations of the seventh and eighth centuries far more successfully than previously believed. Their political influence collapsed only after a large number were killed during three decades of extreme violence following Huang Chao’s sack of the capital cities in 880 CE. 2015 James Breasted Prize, American Historical Association

The Ganges Vishwambhar Prasad Sati 2021-08-07 ‘The Ganges: Cultural, Economic, and Environmental Importance’ is a geographical, cultural, economic, and environmental interpretation of the Ganga River. The Ganga River originates from Gaumukh- situated in the high Himalaya, flows through the world’s biggest fertile alluvial plain, and inlets into the Bay of Bengal at Ganga Sagar. It makes a unique natural and cultural landscape and is believed to be the holiest river of India. The Hindus called it ‘Mother Ganga’ and worship it. The towns/cities, situated on its bank, are world-famous and are known as the highland and valley pilgrimages. The water of the Ganga is pious, and the Hindus use it on different occasions while performing the rituals and customs. This book is unique because no previous study which presents a complete and comprehensive geographical description of the Ganga has been composed. This book presents the

historical and cultural significance of the Ganga and its tributaries. Empirical, archival, and observation methods were applied to conduct this study. There are a total of 10 chapters in this book such as ‘Introduction’, ‘the Ganga Basin’, ‘Geography of the Ganga Basin’, ‘the Ganges System: Ganga and its Tributaries’, ‘Ganga between Gaumukh and Uttarkashi’, ‘the Major Cultural Towns’, ‘Major Fairs and Festivals’, ‘Economic Significance of the Ganga’, ‘Environmental Issues’, and ‘Conclusions’. The contents of the book are enriched by 89 figures, 15 tables, and substantial citations and references.

Endoscopic Biopsy Interpretation M. Priyanthi Kumarasinghe 2018-12-10 The volume of endoscopic biopsies being performed continues to grow rapidly and they now represent one of the most common specimens encountered in routine surgical pathology practice. It is essential to maintain the balance between the speed and accuracy while integrating emerging sophisticated pathology techniques into endoscopic biopsies in routine practice. Microscopic appearance is virtually diagnostic of certain diseases. In others a diagnosis may be rendered only after correlating the microscopic pattern with clinical clues aided by ancillary tests. This text provides a guide to systematic approach of endoscopic biopsies to render a safe, quick and accurate pathological diagnosis in an integrated manner as well as important information that pathologists and clinicians should know to get the best value of endoscopic biopsies. The first chapter introduces the key microscopic features that are normal and abnormal in the gut mucosa as appreciated in an endoscopic biopsy. The second chapter presents a general overview highlighting the neoplastic and non-neoplastic patterns that are common to the entire tubular gut. Because some patterns are common to many sites, an overarching chapter gives the reader a generalized approach, which will be further refined in subsequent site specific chapters. The disease etiologies of each pattern are discussed, with emphasis placed on the most common causes that will be encountered in clinical practice. The subsequent chapters that follow then concentrate on patterns encountered at specific anatomical locations. Under each anatomical location (esophagus, stomach, small intestine and large intestine) site specific patterns of both neoplastic and non-neoplastic conditions are described. Conditions that affect many sites in the gastrointestinal tract are discussed in detail in the most relevant site chapter, but are referred to in other chapters as the reaction pattern/s they produce at that site is discussed. Ancillary tests that are required for a diagnosis of some diseases in particular neoplastic conditions are listed with tips for interpretation. This is presented mostly in a table format to assist day-to-day quick reference. In keeping with recent advances of using small biopsies for testing clinically relevant bio markers, important information that the pathologists and clinicians need to know is highlighted in appropriate sites. Authored by experts in the field, each chapter is presented under headings that include diagnostic features, patterns with relevant endoscopic and clinical clues, traps and overlapping features, and appropriate ancillary tests including clinically relevant molecular signatures in endoscopic biopsies.
